

REPROLINE SPECIAL

Characteristics

Developer concentrate with universal properties for line, and daylight films. This developer works very cleanly with low for level and a very high stability. The developer contains additives against oxidation and sludge accumulation in the developer tank.

Preparation

Dilution: 1 + 3

30 litres water + 10 litres concentrate make 40 litres ready-to-use developer or replenisher.

The ready-to-use replenisher in the replenishing tank has to be used up within 2 weeks.

Development conditions

The following development conditions are recommended:

Developer temperature:	°C	32	35	38
Developing time:	s.	35	30	25

Replenishment

The replenishment rate for an average working condition (about 5 m²/working day): 200 ml/m².

Packaging

REPROLINE SPECIAL

10 l. conc. in PE-can
